PROJECT EXPERIENCE

Python ORM

The project provides a Python API for database access, allowing the creation and modification of tables. It includes a migration engine, a CLI tool for managing database migrations, and a web interface for viewing and editing data. Supports SQLite and PostgreSQL.

Language course rating website

A web application that facilitates the exchange of reviews and discussions about language courses offered by the Warsaw University of Technology. Technologies used: backend - Spring Boot, frontend - CRA.

The Monkey programming language interpreter

Developed an interpreter for a simple, dynamically typed programming language using Go. It supports both basic and complex data types, as well as functions, including higher-order functions. The interpreter includes a REPL for interactive use.
